

## Turning Cross

Customized turning crosses for web processing

### WEB DEFLECTION

## Turning Crosses With Microporous Air Turn Bars

Turning crosses are used when the material web needs to be turned for the downstream process. The turner bars are the heart of every web deflection system like this one. That is why we integrate Printum's special [microporous turning bars](#). We are happy to design customized turner bars for your machine.

### ADVANTAGES

## Custom-Tailored To Your Needs

- We adapt the design to your available space
- In contrast to conventionally used drilled turning bars, the microporous turning bars work almost silently
- This means that the turnstile has significantly reduced compressed air consumption

## Specifications

- Up to web widths of 800 mm
- Requires compressed air
