

Multilayer-Kit

The Original for
Multilayer Labels

UPGRADE FOR MULTI-LAYER LABELS

Web Shifting Device

Peel and reveal labels and sandwich labels on your existing system

Do you want to produce multilayer labels, but don't know whether you can generate sufficient utilization for a new multilayer label converting machine? Do you want to produce small to medium-sized quantities **quickly and flexibly** yourself? Then you will be like many of our customers.

Some call it a seal unit, crossover module, cross-over unit, peel & reveal module or peel and seal unit. We call our upgrade-solution "Multilayer-Kit (MLK)".

This **plug & play** upgrade can be easily integrated into your existing machine from Gallus, Nilpeter, MPS, Mark Andy, Bobst, Omet, Rhyguan, AB Graphic, Grafotronic etc. You can produce up to **three-layer** sandwich labels.

ADVANTAGES

Precise and efficient.

- Upgrade for your existing label printing press
- Compatible with any label printing press or converting machine
- The most compact design on the market – the Original!
- Simple and fast installation
- No electrical integration required
- Durable and reliable
- Intuitive operability
- Our microporous turning bars are integrated for contact-free and precise web guiding
