

Turning Cross

Customized web
turning solutions

TURNING BAR SYSTEM

Turning flexible materials in web-handling and converting

Turning crosses are used when the substrate needs to be turned for the downstream process. The turning bars are the heart of every turning cross. That is why we integrate the special microporous turning bars from Printum. We offer customized turning crosses for your machine and requirements.

ADVANTAGES

Customized to your needs

- We adapt the design to your available space
- Precise web handling due to air turn bars
- In contrast to conventionally used drilled turning bars, the microporous turning bars work almost silently
- This means that the air turning bars have significantly reduced compressed air consumption

SPECIFICATIONS

Technical data

- Up to web widths of 800 mm
- Requires compressed air
